

Homework Assignment: Django Models

Objective:

Create two Django models and generate a PDF that includes the following:

- The code for both models.
 - A screenshot of the models in the Django admin interface.
-

Task Details:

1. Create Two Django Models:

- Create a Django project and an app within the project.
- Inside the `models.py` file of your app, define two models. You can choose any real-world entities for your models (e.g., `Book` and `Author`, `Product` and `Category`).
- Ensure each model has at least three fields (e.g., `name`, `description`, `created_at`).

2. Register Models in Admin:

- Register your models in the Django admin interface so they can be managed via the Django admin panel.
- Take a screenshot showing both models listed in the Django admin interface.

3. Generate a PDF:

- Write up a short description of what your models represent.
- Include the full code for your `models.py` file.
- Include the screenshot of the models in the Django admin interface.
- Format everything nicely in a document, convert it to a PDF.

4. Submission:

- Submit the generated PDF file here.
